TRAP ENERGY SOLUTIONS

STEAM SYSTEM CRES SCORE
Compliance · Reliability · Energy · Safety

FOR DISTRICT ENERGY & CENTRAL HEATING PLANTS

Your plant's biggest energy user is the one no one is watching.

Steam and hot water are your product — and the plant that makes them is the **single largest energy user you run**, and the one fewest people still know how to optimize. In one lean, senior-led engagement, we hand you your **CRES Score** — a single rating across **Compliance, Reliability, Energy efficiency and Safety** — the evidence behind it, and the ranked fixes to raise it.

The squeeze you know: Facilities, sustainability and reliability teams are told to cut energy and carbon and hit decarbonization commitments — on a limited capital budget — while steam expertise walks out the door with every retirement. Metering tells you what a plant uses. It never tells you **where the loss is, what condition the equipment is in, or where to start.** That's the gap we close.

YOUR CRES SCORE — FOUR DIMENSIONS, ONE NUMBER

Compliance — C

Boiler-code, CSD-1 and jurisdictional-inspection gaps found and documented — the records that support your PUC/utility, environmental-permit and boiler-safety files.

Reliability & Continuity — R

Single-point-failure and choke-point analysis across the plant and distribution — because when steam goes down, so does every building on your loop. We find the risk before it becomes an outage.

Energy Efficiency — E

Measured combustion efficiency at each boiler plus a defensible, measured plant-performance baseline — the number that protects your margin and your decarbonization commitments.

Safety — S

Safety-valve and low-water-cutoff testing, combustion-safeguard verification, and the documented EHS findings your risk and insurance records need.

Condition is the evidence — rolled into one CRES Score

Trap state, insulation, corrosion and equipment integrity are what we inspect on-site — the physical condition behind every grade. It all rolls into a single comparable CRES Score per plant, so you know exactly where to start.

WHAT YOU RECEIVE

- **Your CRES Score & scorecard** — Compliance, Reliability, Energy and Safety graded and rolled to one number per site.
- **Digital boiler-room walkthrough** — a navigable 360° + thermal record; every finding pinned to where it physically is.
- **Code-grounded written report** — prioritized findings across all four dimensions, each ranked by payback and carbon.
- **Measured efficiency baseline** — a defensible number to report progress toward your decarbonization goals.
- **Annual re-score** — lighter follow-ups that re-run your CRES Score and quantify the savings from completed projects.

BUILT FOR YOUR TEAM

Facilities / Plant Eng.	The equipment inventory, digital record and single-point-failure map the plant doesn't have today.
Sustainability	A defensible, comparable carbon & energy baseline to prioritize capital and report verified progress.
Safety & Compliance	Code-grounded, documented findings that strengthen your utility, environmental and jurisdictional records.
Finance / Capital	An ROI-ranked roadmap that points scarce capital at the highest-return projects — and proves the spend worked.

THE BOTTOM LINE

One failed-trap population, one excess-air correction, or a **single avoided hour of an outage on your loop** saves more than the CRES Score costs — and the deliverables become the visual, comparable, defensible case you take to your own leadership.

Get your plant's CRES Score. Stop by and talk with us.

SCAN TO VISIT

TOOLS YOUR TEAM CAN USE — NOT A REPORT THAT SITS ON A SHELF

Code-grounded written report

Prioritized findings across compliance, safety, reliability and efficiency — every recommendation ranked by payback and carbon so the sequence of work is decided for you.

Digital boiler-room walkthrough

A navigable 360° + thermal scan of the room. Findings are pinned to their physical location; revisit any plant any time, from anywhere, without a return trip.

Your CRES Score & scorecard

Compliance, Reliability, Energy and Safety graded on the same basis at every facility and rolled to one CRES Score — so a multi-site system can be ranked and triaged objectively.

Measured steam-performance baseline

Energy in, minus measured losses, to a defensible efficiency number — the anchor for capital decisions and for reporting verified progress.

Annual re-score

A lighter follow-up visit that re-runs your CRES Score, verifies completed projects and quantifies the savings — keeping your baseline and reporting current year over year.

OPTIONAL ADDER

Compressed-air leak survey

While our ultrasonic gear is on-site, we survey compressed-air leaks in the same visit — a fast, high-ROI cut to one of the plant's most expensive loads.

LEAN BY DESIGN — IN AND OUT WITHOUT DISRUPTING THE PLANT

1

Pre-visit data

A short, identical request per site. Send a one-line steam diagram and we model your system before we arrive.

2

On-site, ~2 days

A small senior team measures, scans and walks down the whole system while you keep running.

3

Your CRES Score in ~1 week

Score, scorecard, digital walkthrough and ranked fixes delivered fast — no months lost to research.

4

Act & re-score

You execute the ranked roadmap; we return annually to re-score and quantify the savings.

HOW YOUR CRES SCORE IS BUILT

Boiler Room

Combustion, equipment condition, compliance, safety, water & electrical use, reliability.

Steam Distribution

Traps, insulation, condensate return, flash recovery, venting, piping & supports.

Your CRES Score

Both areas roll into one comparable score per facility — rank a whole system and know where to start.

The CRES Score is the front door. It gives your team a clear, defensible picture of the steam system — and gives us a shared, measured basis to help you implement the **energy and equipment solutions** it uncovers. Start with knowing exactly where you stand.

Get your CRES Score. Let's talk.
